

Repo Structure

data

The data folder contains the exercise data and the database file.

exercise_mgr

database

The database folder contains the sqlite wrapper and the sqlite commands for the database creation.

gui

The gui/kivy module contains the python scripts for the gui: ExerciseMgr.py and exercisemgr.kv for the structure, utils_gui.py for the logic and data.py for the Exercise data class

populate

The module populate contains the scripts for creating and populating the database. For info on how to use this module check Create.Database.pdf

one_click_demo

The module for the one click demo. When creating your own one click demo for this project, make sure to include the files: data.py, ExerciseMgr.py, exercisemgr.kv, Settings.py, sqlite_wrapper.py utils_gui.py and change the import paths and the paths in Settings.py

presentations, and tests

The presentations folder contains our presentations and our documentation, the tests folder contains our tests. For a better overview we recommend using the README.md for navigation.
